Phase 3 Individual Submission

Personal Contribution:

I implemented the Player object and all of its functions and variables. I also programmed the main function in the program to make sure it performs all the right function calls in order. I also made sure that all the different header files and cpp files are linked properly and added comments to most things in the program. I made sure everything was working well and debugged every aspect of the code.

Score Distribution:

I believe I (Zayd) should get 40 points. Noor should get 30 points. Hasib should get 30 points. Everyone did their job properly but I did extra stuff to make sure everything is working well and I was consulted on most aspects of the program so this distribution should be fair.
